OP AMP TRAINER KIT

ANALOG & DIGITAL DEVICES

Model: OP -20

specificatioon

input: 230V AC 50Hz +/- 10%

output DC Supply: +/-5V/1A, +/-12V/1A, +/- 1.2 to +/- 15V/1A variable on Board IC 741, Digital

Meter 3_{1/2} Digit Function generator

Range: 1Hz to 100KHz (sine, square),

onBoard: potentiometers - 1K 10K with terminations, analog terminals: all Connection

are multi colour 2mm soke, assembled in Glass Epoxy printed Board, above

Brand mounted on Atractive powder coated with pach chord & instruction

manual.

Experiments

Study of operational amplifier (OP-AMP IC 741) parameters and operational amplifier amplification such as inverting amplifier, non inverting amplifier, and Voltage follower, study of operational amplifier advance applications, Test points provided on panel stages in the circuit.

Analog & Digital Divices
